

Partizo App Summary

What it is

Partizo is an Expo-based React Native app for discovering and hosting small group outings with vibe-based matching, profiles, and chat.

Who it is for

People who want to meet others and join or host local outings; hosts managing events.

What it does

- Email and Google sign-in plus onboarding for profile, photos, prompts, and vibe answers.
- Discover outings, view details, see vibe match, and request to join.
- Create and host outings with host dashboard and management tools.
- Vibe people feed with connection requests, limits, and match scoring.
- Direct and outing chats, plus a unified chat list.
- Notifications center for requests and outing updates.
- Safety settings and ID connection review, plus profile preview and sharing.

How it works

- Expo React Native client with stack and tab navigation driving screens.
- Firebase Auth with AsyncStorage persistence for sign-in state.
- Firestore stores users, outings, connection requests, chats, and notifications.
- AuthContext loads profile from Firestore and gates onboarding vs. main app.
- Screens subscribe to Firestore in real time; storage utilities encapsulate writes.

How to run

1. npm install
2. Set env vars: EXPO_PUBLIC_FIREBASE_API_KEY, EXPO_PUBLIC_FIREBASE_AUTH_DOMAIN, EXPO_PUBLIC_FIREBASE_PROJECT_ID, EXPO_PUBLIC_FIREBASE_STORAGE_BUCKET, EXPO_PUBLIC_FIREBASE_MESSAGING_SENDER_ID, EXPO_PUBLIC_FIREBASE_APP_ID, EXPO_PUBLIC_FIREBASE_MEASUREMENT_ID, EXPO_PUBLIC_GOOGLE_MAPS_API_KEY (values not found in repo).
3. npm run start (choose android, ios, or web).
